Professional Summary

I specialise in backend development, where I feel most confident and focused. I also have experience in frontend development. Building projects, particularly solving complex technical challenges and creating new, effective solutions, is what motivates me. While I am comfortable working with a variety of technologies, I am passionate about developing strong, innovative, and robust backend solutions that bring meaningful results to projects.

Education

Yıldız Technical University   *Sep 2014 – Feb 2019*
Computer Education and Instructional Technologies

- **Coursework:** Computer Networks And Communication, Operating Systems And Applications, Applications of Artificial Intelligence in Project Development And Management.

Edirne Anatolian Technical and Vocational High School   *Sep 2009 – Jun 2013*
Information Technologies Department

Experience

Full Stack Developer   *Remote*
My Next Match   *Jul 2021 – Present*

- Played a key role in a platform serving tens of thousands of users and 10,000+ organisations, including international federations, national teams, and clubs. Supported the organisation of hundreds of events, processed 21,000+ bookings, and generated over 12,000 results.
- Utilised technologies such as PHP, Java, Vue.js, Angular, and GraphQL to contribute to both frontend and backend development. Developed microservices to ensure platform scalability and maintainability.
- Implemented complex scenarios, including payment systems, ticketing, and real-time result integrations from third-party applications.
- Optimised complex queries related to athlete data, resolving N+1 query issues, implementing query caching, and creating view tables in PostgreSQL, significantly improving query performance.
- Streamlined data workflows by developing triggers and database functions for PostgreSQL and MySQL.
- Enhanced the payment system with support for multiple currencies and exchange rate calculations, allowing users to process payments with their preferred methods.
- Contributed to membership management for organisations, digital ID cards for athletes, and integrated wallet application functionality for federation members.
- Led code reviews, improving code quality and system performance, and contributed to smoother development processes.
- Currently working as part of a team on a new mobile/web application for tracking athlete health, focusing exclusively on backend development and overseeing the management of the development process.

Software Developer   *Remote*
Webtures   *Oct 2020 – Jun 2021*

- Managed the maintenance and enhancement of WebturesApp, significantly improving platform stability and service delivery for SEO clients. By addressing query caching, resolving n+1 query issues, and optimising server configurations, I reduced page load times from 5+ seconds to a max of 2 seconds per page.
- Utilised technologies such as JavaScript, PHP, SQL, and Rest API to enhance both frontend and backend capabilities.
- Integrated Big Data insights and KPI-focused keyword analysis to optimise SEO strategies.
- Developed an internal tool to automate processes, contributing to overall team efficiency.

Software Specialist *Ankara, TR*
TR Eğitim ve Teknoloji *May 2019 – Oct 2020*

- Led the initial coding and design of processes for the MVP version of the product, laying the foundation for subsequent development and implementation.
- Contributed to key non-military projects under the Presidency of Defence Industries, optimising and coding backend processes for platforms serving tens of thousands of users.
- Implemented query optimisations and caching solutions to efficiently manage traffic spikes during high-demand periods.
- Mentored junior developers, enhancing their skills in coding standards, reducing code duplication, improving readability, and encouraging the use of meaningful comments.
- Empowered junior developers to gain proficiency in project technologies, significantly improving their contributions to the team.

Software Developer *Istanbul, TR*
Manastır *Jun 2018 – May 2019*

- Developed and maintained event websites, including platforms for fairs, congresses, and other events, ensuring they met client specifications and performance standards.
- Worked as a full-stack developer, delivering some projects independently, handling both frontend and backend development.
- Contributed to mobile application development, prioritising backend functionality and optimising system performance.
- Supported the development of SaaS products, both for internal use and as services provided by the company, working collaboratively with the team and contributing code in projects using React.js, Laravel, and Vue.

Software Developer (Part-time) *Istanbul, TR*
Intermedyaweb *Apr 2012 – Sep 2016*

- Developed and maintained client websites using Core PHP, and WordPress.
- Managed ongoing website updates and improvements to ensure optimal performance.
- Gained experience in managing Google Ads campaigns, aligning digital strategies with clients' business goals.
